Sunday, 19 June 2011 17:03 -

The main aim of the project is discovering the wealth and diversity of the partner country culture. We will cover the following areas: history, religion, traditions, literature, music. We will compare the system of values and attitudes of young people towards the problems of the contemporary world. We believe the project will help break the stereotypes and will bring the nations together. We would like to convince the students that expanding the knowledge and interest of culture and its diversity will be the ideal way to bring the European countries and communities together. The European dimension is very important in our project. Our priority is developing language skills, especially communication in English. The language will be the means of communication and cooperation between nations.
